Product Description

56820-1E000 Tie Rod End Fit For SONATA Optima

Product Description:

A **tie rod end** is an important component of a vehicle's steering system. It is situated at the outer ends of the tie rods, connecting the steering linkages to the steering knuckle or spindle. Consequently, this component has a significant influence on steering control and stability, as it enables smooth and precise turns.

Features:

Our tie rod end is designed and constructed with high-quality materials like forged or cast steel to resist wear, impact, and corrosion, ensuring long-lasting durability.

It connects the steering linkage to the steering knuckle, translating the driver's input into smooth and precise steering movements, providing optimal steering control and responsiveness.

The type of tie rod end required for a vehicle is depending on its specifications; the ball joint type provides articulation and rotational movement, while the bushing type offers flexibility and vibration dampening.

Installation is easy and convenient; all the necessary hardware and instructions are provided.
